JAC MOTORS

QUICK START GUIDE.

GO AHEAD, START ME UP:

When turning the key on the JAC truck you'll hear the truck make a few sounds as it gets ready, these are auto checks and this is normal.

RUN IN PERIOD:

This truck has a run in period. Please drive carefully for the first 3,000kms to ensure a better performance and longer life of the vehicle.

REGULAR CHECKS OF YOUR TRUCK:

This JAC Cummins requires regular servicing as per its service schedule. Below are a few things to check at least once a week to keep your truck in tip top shape:

- Check oil and coolant levels are adequate
- Check there are no oil or coolant leaks
- Top up the water and add a solution such as bars bugs for your windscreen washer
- Check tyres are inflated
- Do a walk around the truck before driving each day to check for any loose parts

*this is not a complete list and are suggested checks in line with normal truck maintenance and checks. Service intervals are subject to change & we recommend chatting to your JAC dealer.

AIR BRAKES:

On the air tanks for the brakes, there is a pressure valve underneath. We recommend pressing the valve to drain any water that's been collected (normally minimal) pending conditions such as rain.

DPD-SCR-DOC:

This vehicle has a Euro6 Diesel engine. Please make sure that you understand the operations of the emissions systems such as the DPF and AdBlue.

DPF:

This truck is fitted with a DPF (Diesel Particulate Filter/ Diffuser) to meet emissions standards. We recommend becoming familiar with how this works as if it doesn't operate as it should it can cause the vehicle to go into limp mode or need a JAC mechanic assistance.

HERE TO HELP:

Got a question? Don't hesitate to give our team a shout, you can call your sales team directly or drop us a line on 0800 922 522.

ROADSIDE ASSIST:

We're here if you need us - give us a call on **0800 922 522** and our team will connect you to assistance on the road.
