JAC MOTORS

QUICK START GUIDE.

GO AHEAD, START ME UP:

When turning the key on the JAC truck you'll hear the truck make a few sounds as it gets ready, these are auto checks and this is normal. Once completed, turn the key as you would normally, and then once the green READY light comes on you're ready to go.

CHECK MY CHARGE:

Just the same as a Diesel, we recommend having a quick look to make sure you've got enough 'juice' for your trip. We've gotten over 200km fully loaded around Auckland-city roads.

CHARGING THE JAC EV TRUCK:

This JAC EV Truck uses 'DC' (Direct Current) Charging. This means that you need to use a charger or charging station that provides this type of charging.

1. Access your DC Charger, or find your closest EV charging station that offers DC / "CCS2" charging. A suggested handy app and website to use is 'Plugshare'. You can filter for CCS2 charging by looking for this icon:

2. At the charger, plug the JAC truck in and follow the charger instructions to begin charging.

48 MINUTES

FAST CHARGE = 48 MINUTES:

This JAC EV truck has a 107kwh battery that takes around 48 minutes to fast charge (from 20% to 80%).

USE ECO MODE DOWN HILLS:

When driving down longer hills we recommend switching into 'ECO' mode by pressing the button on the dash. In ECO mode you will get the best energy regeneration which improves your range, and increase brake force which can also help to reduce brake fade through overheating.

HILL START ASSIST:

When taking off on a slope, HSA can assist you by holding the vehicle in place by using the braking system. To use this function, press the HSA button.

ADVANCED EMERGENCY BRAKING:

When the ADAS (advanced driver assistance system) detects a risk of a front collision, it can alert the driver with a warning. If the driver fails to take effective measures to avoid the collision, this function can assist by automatically applying emergency braking to avoid or mitigate the impact of a collision.

*ADAS features are designed to assist the driver. You must remain in control of the vehicle at all times.

ROADSIDE ASSIST:

We're here if you need us - give us a call on **0800 922 522** and our team will connect you to assistance on the road.
